

The autonomous control center for Kubernetes.

A native command center that watches your cluster, diagnoses incidents with an AI copilot, and safely fixes the ones it's allowed to — behind hard guardrails you control.

PRE-SEED · 2026

KUBERNETES · AGENTIC AI

THE PROBLEM

Kubernetes runs the world. Operating it is brutal.

82% of container users now run Kubernetes in production — but the tooling assumes a senior SRE is awake and staring at a terminal when things break. Most teams don't have that.

\$2M/hr

Median cost of a high-impact outage (New Relic, 2025) — about \$33K for every minute a core system is down.

3 a.m.

When incidents actually happen — and a human still has to reconstruct context from scattered logs and events.

91%

of Kubernetes usage sits in orgs of 1,000+ people: complex clusters, thin rotations, scarce SRE talent.

Today's tools split the job and leave the hard part to you: dashboards show something is wrong, alerting tools wake someone up — **but a human still has to investigate, decide, and type the fix.**

THE SOLUTION

Rigel closes the loop — with guardrails.

One native app that unifies seeing, understanding, and fixing your cluster.

01 — SEE

Live control center

20+ purpose-built panels fed by a single set of live watches. State stays current without manual refreshes.

02 — UNDERSTAND

Claude copilot

Ask "what's broken?" and it investigates with structured tools instead of guessing — full context, one right-click away.

03 — FIX

Autonomous Assistant

An agent runs inside the cluster, auto-fixes the safe tier, and queues everything destructive for your approval.

Every mutation is gated. Rigel never changes your cluster without an explicit rule or click.

A real product, shipping today.

Native macOS desktop app. Runs on your existing kubeconfig — nothing to deploy to start.

- 20+ live panels across the whole cluster surface, with CPU/memory sparklines, log tailing, and one-click port-forward
- A persistent Claude chat that understands your cluster and can run guarded actions
- Right-sizing that compares real usage to requests and limits
- An installable app catalog with a guided setup wizard

GUARDED ACTION — CONFIRMATION SHEET

```
# shown before anything runs
△ Restart deployment · payments-api
$ kubectl rollout restart \
  deploy/payments-api -n prod

● backup taken · revert available
```

Cancel Confirm

Restarts, scaling, deletes and secret edits show the exact command first — then back up and offer one-click revert.

Autonomy a platform team will actually turn on.

Anyone can wire an LLM to `kubectl`. The defensible part is making autonomous remediation safe enough to trust in production. That trust layer is the product.

Three autonomy modes

- **Auto** — apply safe-tier fixes automatically
- **Advisory** — queue everything for approval
- **Quiet-hours** — auto by day, queue overnight

Guardrails, always on

- An RBAC cage that can't touch Secrets — destructive actions blocked at the cluster
- Circuit breakers, spend caps, and an instant kill-switch
- Backup-before-mutate, one-click revert, fail-closed on any error

No API key. The agent runs on your existing Claude subscription — **no metered inference bill, no new vendor to procure.**

WHY NOW

Two curves just crossed.

Kubernetes became the default

Production K8s is now the norm, not the frontier — 82% of container users run it in prod, 5.6M+ developers worldwide. The operational pain is universal and permanent.

Agents got good enough to act

Frontier models can now reliably investigate and reason over live infrastructure with tools. "Diagnose and fix" is a credible autonomous task — not a demo.

The missing piece was never intelligence — it was **trust**. A team only hands over the keys if autonomy comes with hard, auditable limits. Rigel is built limits-first. That's why now, and why us.

MARKET

A large market, compounding fast.

TAM

~\$18B

AIOps / autonomous IT-operations market (2026), growing ~18–24% a year.

SAM

\$8.4B

Kubernetes management & operations tooling by 2031, up from \$3.1B in 2026 (~22% CAGR).

Beachhead

2M+

AWS customers running containers; EKS holds ~30% of managed K8s. Our wedge in.

Land bottom-up with the platform and SRE teams who feel the pain first, then expand across the org's clusters — riding the same adoption curve that took Kubernetes to 82% of production.

COMPETITION

Everyone shows you the problem. We close the loop.

CATEGORY	EXAMPLES	SEE CLUSTER	AI DIAGNOSIS	AUTONOMOUS FIX	GUARDRAILS
Dashboards / IDEs	Lens, k9s	Yes	—	—	—
Observability	Datadog, New Relic	Yes	Assist	—	—
Incident / on-call	PagerDuty, Opsgenie	—	Assist	Routes to human	—
K8s troubleshooting	Komodor, Robusta	Yes	Partial	Limited	Basic
Rigel	—	Yes	Yes	Yes, safe-tier	RBAC cage + kill-switch

The only tool that **safely acts** — native to your kubeconfig, with backups and revert — rather than adding one more dashboard or one more page.

BUSINESS MODEL

Bottom-up SaaS: per seat, plus per cluster.

Land free with individual engineers; monetize the Assistant and team features. Pricing indicative.

FREE

\$0

Single cluster. All panels + Claude copilot on your own subscription. The wedge onto every laptop.

PRO

\$29_{/user·mo}

Multi-cluster, the autonomous Assistant, right-sizing, priority updates.

TEAM

\$99_{/user·mo}

SSO, shared audit timeline, fleet-wide policy, role-based approvals.

ENTERPRISE

Custom

Self-hosted, security review, SLAs — via AWS Marketplace with combined billing.

The agent runs on the customer's own Claude subscription — **no per-incident inference cost, software-grade margins from day one.**

Ride AWS distribution into the enterprise.

01

Bottom-up wedge

Free desktop app spreads engineer-to-engineer. Works on an existing kubeconfig in minutes.

300K+

customers already buying software through AWS Marketplace

02

AWS Marketplace + EKS

Spend counts toward customers' AWS commit and lands on one bill. Deep EKS integration for the 30% of managed-K8s teams on AWS.

Co-sell

access to AWS field teams and marketplace credits to reach EKS accounts

03

Land & expand

One team's clusters become the whole org's. Per-seat + per-cluster pricing compounds with each namespace.

One bill

combined billing removes procurement friction for enterprise buyers

TRACTION

Built. Fast. Solo.

Pre-launch, in private beta. The signal today is velocity and depth: a complete Kubernetes platform and an in-cluster autonomous agent, shipped by one founder in weeks.

1,250+

commits in ~7 weeks, from a standing start

20+

live cluster panels, plus copilot and agent

1

founder — capital-efficient execution

[]

waitlist signups — add your current number

Next 90 days: code-sign and ship the public build · onboard 5–10 design-partner teams on EKS · list on AWS Marketplace and open the paid Pro tier.

VISION

From copilot to autopilot for infrastructure.

Kubernetes is the wedge. The same trust layer — diagnose, act, guardrail, revert — generalizes to the whole cloud stack.

NOW

Kubernetes control center

Native app, Claude copilot, safe-tier autonomous remediation.

NEXT

Team platform & fleets

Multi-cluster fleets, shared policy, audit and approvals, deeper cloud-native integrations.

LATER

Autonomous infra platform

The guardrailed action layer extends across cloud resources, CI/CD, and cost.

Rigel is building the layer that lets teams delegate operations to AI **without giving up control.**

TEAM

Founder

TC

Tyrel Chambers

Founder & Engineer

Designed and shipped the entire Rigel platform solo — desktop app, backend, shared K8s libraries, and the in-cluster agent.

Why this founder wins

- Deep, hands-on Kubernetes and full-stack expertise — building the hard parts, not outsourcing them
- Exceptional velocity and capital efficiency: a production-grade platform built in weeks, solo
- A product born from real operational pain, not a market map

To add: prior companies and roles, notable projects, years in infra/SRE, and any advisors.

THE ASK

Raising \$750K pre-seed.

To go full-time, convert design partners into paying teams, and land the AWS Marketplace + EKS channel.

USE OF FUNDS

Founder + first 1–2 hires · 18-mo runway **55%**

GTM · AWS Marketplace, design partners **25%**

Product · security, signing, infra **20%**

MILESTONES THIS ROUND BUYS

- Public launch and AWS Marketplace listing
- 10+ paying teams; first recurring revenue
- AWS co-sell relationship established
- Clear seed metrics: usage, retention, expansion
